

One of the biggest obstacles faced by enterprises migrating to the cloud is the inability to easily and cost effectively integrate legacy systems with newer Cloud based applications. Let Xavor Corporation help you leverage Microsoft Azure cloud services such as **BizTalk, Service Bus** and **Hybrid Connections** to seamlessly integrate the enterprise and the cloud.

- Rapid integration with **BizTalk Hybrid Connections** technology
- Extend on-premises systems to the cloud for hybrid integration
- Proven integration support **with EDI, B2B, Partner, EAI** and emerging technologies such as IOT
- Implement step wise migration to the cloud, with **private** clouds and **hybrid** cloud patterns

## BizTalk Enterprise Application Integration

Microsoft Azure BizTalk Services provides out-of-the box, cloud to on-premises and line-of-business application integration capabilities.

- Quick integration with popular legacy enterprise application such as **SAP, Oracle EBS, SQL Server, PeopleSoft** etc.
- Connect with any (web standards compliant) data source
- Messaging made easy by Azure services such as **Service Bus queues, Topics, SQL Database, and Blob** storage

## Hybrid Connections

The Hybrid Connections feature of BizTalk Services lets you connect Azure based web applications or Azure Mobile Services to any on premise resources.

- Use web standards (HTTP/HTTPS) to connect to Databases, mail server, directory servers or any complaint data source
- Legacy data exchange over TCP/IP
- Out of the box solutions, that just can be configuration and deployed.

## Service Bus: Easy Interop

Azure Service Bus is a generic, cloud-based messaging system for connecting just about anything—applications, services, and devices—wherever they are. Connect apps running on Azure, on-premises systems, or both.

- Build reliable and elastic cloud apps with messaging
- Protect your application from temporary load peaks
- Distribute messages to multiple independent backend systems
- Reach millions of devices with sub-second response times
- Decouple your applications from each other
- Build solutions that work with existing networks
