

# Security Policy & Privacy with Microsoft Azure Cloud

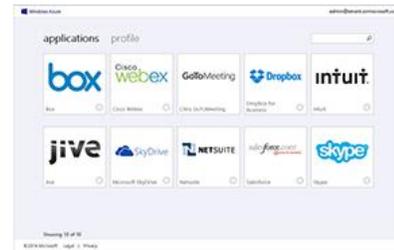

Microsoft Azure Cloud applications can ensure highest grade security by incorporating Authentication, Authorization and Policy/Governance. Azure Active Directory is a comprehensive identity and access management cloud solution that provides a robust set of capabilities to manage users and groups. It helps secure access to on-premises and cloud applications, including Microsoft online services like Office 365 and many non-Microsoft SaaS applications.

## Bring your directory to the cloud for Office 365 and beyond

Bring enterprise directory and identity management to the cloud with Azure Active Directory.

- Centrally manage employee access to Microsoft Cloud Services such as Azure, Office 365, Dynamics CRM Online and OneDrive
- Integrate with thousands of non-Microsoft cloud applications

## Simplify user access to any cloud app

Enable single sign-on to simplify user access to thousands of cloud applications from Windows, Mac, Android, and iOS devices.

- Simplify and enhance user experiences by eliminating multiple credentials
- Single sign-on enables seamless interop across various applications

## Protect sensitive data and applications

Make use of industry best practices around security and privacy to ensure that your applications are secure.

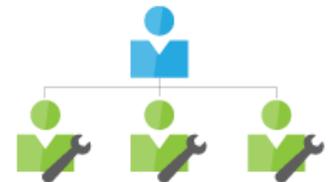

- Azure **Multi-Factor Authentication** prevents unauthorized access to both on-premises and Cloud applications by providing an additional level of authentication.
- Protect your business and mitigate potential threats with security monitoring and alerts.
- Use machine learning-based reports that identify inconsistent usage patterns.

## Enable self-service for your employees

Drive down costs while empowering the 21<sup>st</sup> century 'knowledge worker' by enabling delegation of control and collaboration.

- Delegate important tasks to your employees, such as resetting passwords and creating and managing groups.
- Provide self-service password change and reset and self-service group management.

## Integrate with Active Directory (On Premise)

Extend Active Directory and any other on-premises directories to Azure Active Directory to enable single sign-on for all cloud-based applications.

- User attributes can be automatically synchronized to your cloud directory from on-premises directories
- Plan a gradual migration to the Cloud, ensuring maximization of ROI on legacy systems

## Get enterprise scale and SLA

Active Directory Premium can provide the level of scale and reliability required by the largest enterprises.

- High availability service with 99.9% SLA
- Hosted in globally distributed datacenters
