

- **Mobile Workforce Enablement with**
- **Microsoft Azure Mobile Services**

Fast track the expansion, availability and efficiency of enterprise applications by making them available across the spectrum of mobile devices. This empowers employees and vastly improves workforce efficiency. [Xavor Corporation](#) can swiftly deliver next generation mobile experiences on mobile platforms (iOS, Android and Windows) by leveraging Azure Mobile Services.

No Compromise on Policy, Governance and Security

Microsoft Azure ensures all data privacy and security concerns are met as your organization rolls out new mobile based workflows. This includes patterns such as

- Authenticate and authorize mobile users with your existing on-premise directory server (MS Active Directory)
- Take your directory service to the cloud by migrating to Active Directory Online to enable tightly controlled mobile workflows
- Tightly managed interaction with data across legacy systems like Oracle, SharePoint, SAP etc.

Integrate with on-premises data (and Hybrid Cloud)

Maximize the ROI on your existing on-premise investments by enabling new mobile based experiences to be built on top of existing on premise systems.

- Azure enables mobile apps that consume data from your own data center
- Use Hybrid Connections and VPNs to build secure bridges between on-premises data centers across the globe

Effortlessly Scale up/down to meet business needs

Don't make expensive infrastructure investments to handle peak time loads or to account for future scaling needs. Xavor can help you leverage the elasticity of the Azure Mobile Services cloud to go from 100 devices to supporting 100,000 seamlessly!

- Auto-scale for both Mobile Apps and Notification to match your Apps needs.
- Pay only for what you need and let Azure cloud manage resources accordingly.
- With access to the global network of Microsoft managed data centers, effortlessly reach users anywhere in the world.

Real-time notification and collaboration

Make the pervasiveness of mobile devices work for you by enabling critical business workflows that need real-time communication using Azure Notification Hubs.

- Broadcast personalized push notifications to millions of users in minutes
- Extend legacy on-premise systems to make use of the notifications hubs easily
