

Steps for installing X-Data-Tables:

1. Setup **React/Next** Project with **Typescript**
2. create an `'.npmrc'` file at the root directory of the project and paste the following inside the `'.npmrc'` file :

```
@xavorcorp:registry=https://npm.pkg.github.com/  
//npm.pkg.github.com:_authToken=${process.env.NPM_PAT_TOKEN}
```

3. Replace `'process.env.NPM_PAT'` with your Personal Access Token KEY provided by the admin/company.
4. Next Step is to login npm account:
 - a. Paste following within the terminal:

```
npm login --scope=@xavorcorp https://npm.pkg.github.com
```

- b. Provide credentials as following:

Username: **xavorcorp**

Password: **NPM_PAT_TOKEN**

5. After that, install the package via npm:

```
npm install @xavorcorp/xdatatables
```

6. Now you can import the plugin component withing the app as follows:

```
import {XDataTable} from "@xavorcorp/xdatatables";
```

7. Next step is to import styles as follows in you app.tsx file:

```
import "@xavorcorp/xdatatables/xavor/styles/styles.css"
```

Plugin is supported by react-ts and next-ts, in-case of next-ts framework mark the component as client side component using `'use client'` for rendering the component.
